

TEST CASE DOCUMENT

Fake News Detection Using Social Media Text

YENEPOYA UNIVERSITY

STUDENT NAME: SIVANANADAN K P

REG NO: 23BBCACD512

PROJECT DOMAIN: ARTIFICIAL INTELLIGENCE / NLP

INDUSTRY PARTNER: TCS iON DIGITAL LEARNING HUB

DATE OF SUBMISSION: 12/01/2025

SUBMITTED AS A PART OF INDUSTRY DELIVERABLES

1. Introduction

The purpose of this Test Case Document is to define and document the detailed test cases designed to validate the functionality of the Fake News Detection System. These test cases ensure that the system correctly classifies social media text as real or fake, handles invalid inputs appropriately, and displays prediction results through the user interface. The document helps verify that the system meets its functional requirements before final submission.

2. Test Case Template

- Test Case ID
- Test Case Description
- Test Steps
- Test Data
- Expected Result
- Actual Result
- Status

3. Test Cases

Test Case 1

Test Case ID: TC01

Test Case Description:

Verify whether the system correctly classifies a fake news input.

Test Steps:

1. Launch the Fake News Detection application.
2. Enter a fake news headline in the text input field.
3. Submit the input for classification.

Test Data:

“Breaking news: Scientists confirm the earth is flat”

Expected Result:

The system should classify the input text as **FAKE**.

Actual Result:

The system classified the input text as **FAKE**.

Status:

Pass

Test Case 2

Test Case ID: TC02

Test Case Description:

Verify whether the system correctly classifies a real news input.

Test Steps:

1. Launch the Fake News Detection application.
2. Enter a real news headline in the text input field.
3. Submit the input for classification.

Test Data:

“Government announces new education policy for universities”

Expected Result:

The system should classify the input text as **REAL**.

Actual Result:

The system classified the input text as **REAL**.

Status:

Pass

Test Case 3

Test Case ID: TC03

Test Case Description:

Verify system behavior when no input is provided.

Test Steps:

1. Launch the Fake News Detection application.
2. Submit the form without entering any text.

Expected Result:

The system should display an appropriate warning or error message.

Actual Result:

The system displayed a warning message.

Status:

Pass

4. Conclusion

All defined test cases were executed successfully. The Fake News Detection System correctly classified real and fake news inputs and handled invalid input scenarios appropriately. The test results indicate that the system satisfies its functional requirements and is ready for further evaluation and submission.
